

Welcome to Newton multipurpose lifters - now with Rotary V Bed Attachment

If you need to handle reels, bins, dies, drums, crates - or just about any thing else, the Newton range will help you. With up to 150kg of lifting power housed in a compact unit just 500mm wide, these machines are really easy to use. Power comes from a sealed battery and provides a smooth lift both up and down.

The Rotary V Bed is perfect for use with reels run on loose mandrills. The V, which cradles reels of varying diameter, has a bearing in the base enabling it to turn 360 degrees so that the reel can be presented to either the side or end of a line. Dimensions are cut to suit.
